

# Directional spool valves, pilot-operated, with hydraulic or electro-hydraulic actuation

## WEH and WH

**RE 24751**

Edition: 2018-12

Replaces: 2016-06

H8051+8052

- ▶ Size 10 ... 32
- ▶ Component series 4X; 6X; 7X
- ▶ Maximum operating pressure 350bar [5076psi]
- ▶ Maximum flow 1100 l/min [290 US gpm]

### Features

- ▶ 4/3-, 4/2- or 3/2-way version
- ▶ Types of actuation (internal or external pilot control):
  - Electro-hydraulic (type WEH)
  - Hydraulic (type WH)
- ▶ For subplate mounting
- ▶ Porting pattern according to ISO 4401 and NFPA T3.5.1 R2
- ▶ Spring or pressure centering, spring end position or hydraulic end position
- ▶ Wet-pin DC or AC solenoids, optional
- ▶ Electrical connection as individual or central connection
- ▶ Optional versions:
  - Manual override
  - Switching time adjustment
  - Preload valve in channel P of the main valve
  - Stroke setting and/or spool position monitoring

	Switching time adjustment as supply control	S
	Switching time adjustment as discharge control	S2

### Corrosion resistance (outside)

14	None (valve housing primed)	no code
	Improved corrosion protection (240 h salt spray test according to EN ISO 9227)	J3

### Electrical connection <sup>2)</sup>

15	<b>Individual connection</b>	
	<b>Without</b> mating connector; connector DIN EN 175301-803	K4 <sup>6)</sup>
	For further electrical connections, see data sheet 23178 and 08010	

### Spool position monitoring

16	<b>Without</b> position switch	no code
	Monitored spool position "a"	QMAG24
	Monitored spool position "b"	QMBG24
	Monitored spool position "a" and "b"	QMABG24
	Monitored rest position	QM0G24
For more information, see data sheet 24830		

### Stroke setting

17	For ordering code, see page 36 and 37	
----	---------------------------------------	--

### Throttle insert <sup>2)</sup>

18	<b>Without</b> throttle insert	no code
	Throttle Ø 0.8 mm [0.0315 inch]	B08
	Throttle Ø 1.0 mm [0.0394 inch]	B10
	Throttle Ø 1.2 mm [0.0472 inch]	B12
	Throttle Ø 1.5 mm [0.0591 inch]	B15
	Throttle Ø 2.0 mm [0.0787 inch]	B20
	Throttle Ø 2.5 mm [0.0984 inch]	B25

### Preload valve (not for NG10) <sup>2)</sup>

19	<b>Without</b> preload valve	no code
	<b>With</b> preload valve ( $p_c = 4.5 \text{ bar [65 psi]}$ )	P4,5
20	<b>Without</b> pressure reducing valve	no code
	<b>With</b> pressure reducing valve	D3 <sup>5)</sup>

### Seal material (Observe compatibility of seals with hydraulic fluid used, see page xx)

21	NBR seals	no code
	FKM seals	V
	Observe compatibility of seals with hydraulic fluid used. (other seals on request)	
22	For further information, see the plain text	*

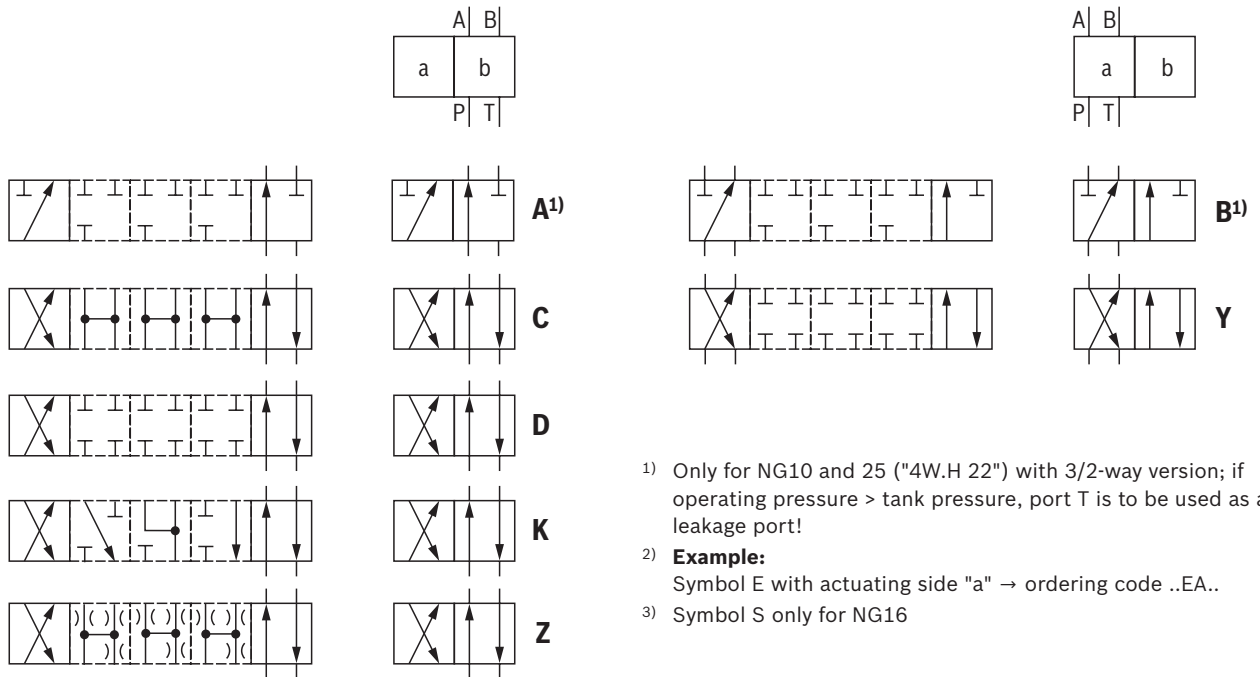

$p_{\text{pilot}}$  = pilot pressure  
 $p_{\text{pilot min}}$  = minimum pilot pressure  
 $p_{\text{tank}}$  = tank pressure  
 $p_c$  = cracking pressure

Explanation of the footnotes, see page 4.

## Ordering code

- 1) ▶ 2 spool positions (hydraulic end position): only symbols C, D, K, Z, Y
  - ▶ 3 switching positions (hydraulically centered): only NG16, NG25 ("4W.H **25**") and NG32
- 2) Only with electro-hydraulic actuation (type WEH)
- 3) Pilot oil supply X or return Y **external**:
  - ▶ The maximum admissible operating parameters of the pilot control valve must be observed (see data sheet 23178)!
  - ▶ Minimum pilot pressure: please observe page 16!
  - ▶ Maximum pilot pressure: please observe page 16!
- 4) Pilot oil supply **internal** (version "ET" and "E"):
  - ▶ Minimum pilot pressure: please observe page 16!
  - ▶ Maximum pilot pressure: please observe page 16!  
With a higher pilot pressure, use of a **pressure reducing valve "D3"** is required (if it is not used pilot pressure = operating pressure at the port!).
  - ▶ In order to prevent inadmissibly high pressure peaks, a **"B10" throttle insert** has to be provided in port P of the pilot control valve (see page 14).
  - ▶ In connection with version "H", the **pressure reducing valve "D3"** is also required.
- 5) Only in connection with the **"B10"** throttle insert
- 6) Mating connectors, separate order, see data sheet 23178

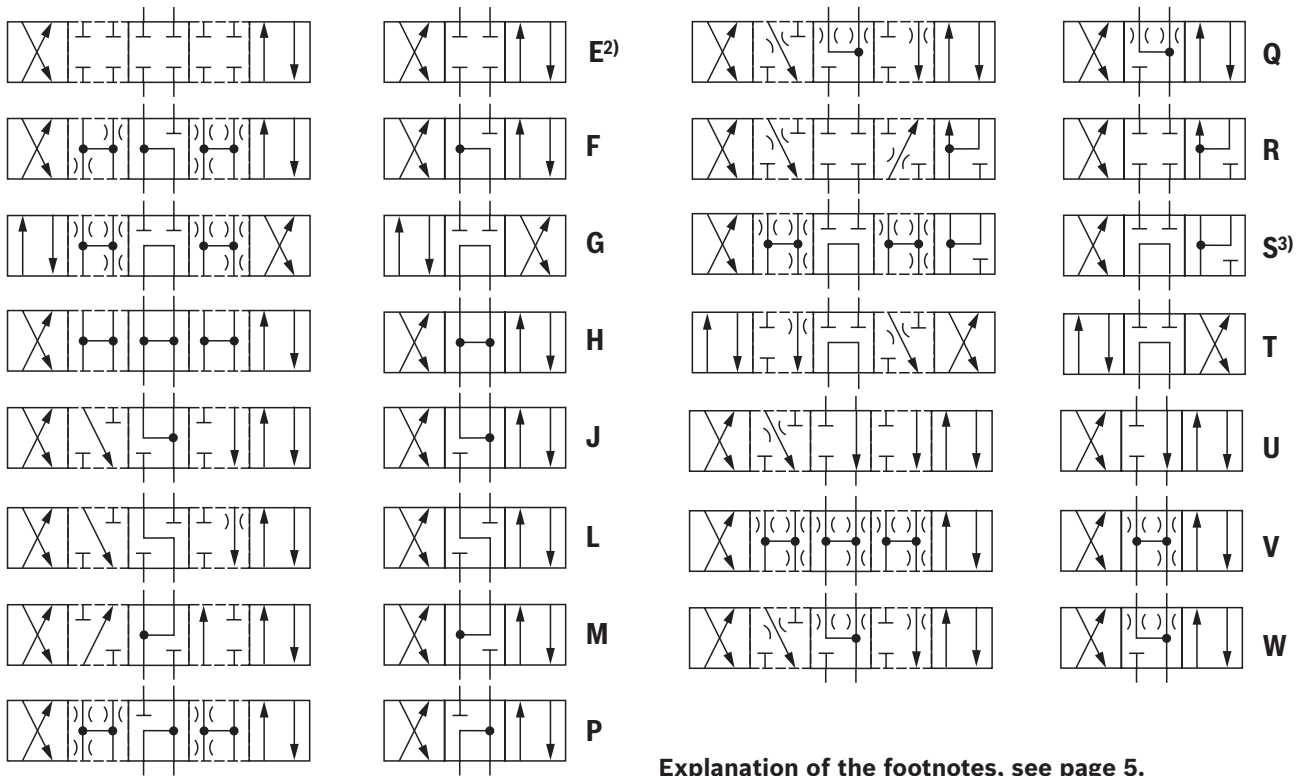

**Symbols:** 2 spool positions

- 1) Only for NG10 and 25 ("4W.H 22") with 3/2-way version; if operating pressure > tank pressure, port T is to be used as a leakage port!
- 2) **Example:**  
Symbol E with actuating side "a" → ordering code ..EA..
- 3) Symbol S only for NG16

**Notice:**  
 3-spool position valves, pressure-centered, preferably with external pilot oil supply and/or return ("no code", "E")  
 For preconditions for internal pilot oil supply and/or return ("ET", "T"), see page 4 and 15.

**Function, section: Type WEH****Directional valves type WEH...**

The valve type WEH is a directional spool valve with electro-hydraulic actuation. It controls the start, stop and direction of a flow.

The directional valve basically consists of the main valve with housing (1), the main control spool (2), one or two return springs (3.1) and (3.2), as well as the pilot control valve (4) with one or two solenoids "a" (5.1) and/or "b" (5.2).

The main control spool (2) in the main valve is held in the zero or initial position by the springs or by means of pressurization. In the initial position, the two spring chambers (6) and (8) are connected with the tank in a depressurized form via the pilot control valve (4). Via the control line (7), the pilot control valve is supplied with pilot oil. Supply can be implemented internally or externally (externally via port X). Upon actuation of the pilot control valve, e.g. solenoid "a", the pilot control spool (10) is moved to the left and thus, the spring chamber (8) is pressurized with pilot pressure. The spring chamber (6) remains depressurized.

The pilot pressure acts on the left side of the main control spool (2) and moves it against the spring (3.1). This connects port P with B and A with T in the main valve.

On switching off of solenoid, the pilot control spool (10) returns to its initial position (except impulse spool). The spring chamber (8) is unloaded to the tank.

The pilot oil return is implemented internally (via channel T) or externally (via channel Y).

An optional manual override (9) allows for moving of the pilot control spool (10) without solenoid energization.

**Notices:**

The return springs (3.1) and (3.2) in the spring chambers (6) and (8) hold the main control spool (2) in central position without pilot pressure even with, for example, vertical valve positioning.

**Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.**

**For pilot oil supply, see page 13 and 14.**

**Function, section: Type WH****Directional valves type WH...**

Valve type WH is a directional spool valve with hydraulic actuation. It controls the start, stop and direction of a flow.

The directional valve basically consists of the valve housing (1), the main control spool (2), one or two return springs (3.1) and (3.2) at valves with spring return or spring centering as well as the diversion plate (11).

The main control spool (2) is actuated directly by pressurization.

The main control spool (2) is held in zero or initial position by springs or pressurization. Pilot oil supply and return are external (see page 13).

**4/3 directional valve with spring centering of the control spool**

With this version, the main control spool (2) is held in zero position by two return springs (3.1) and (3.2). The two spring chambers (6) and (8) are connected to ports X and Y via the diversion plate (11).

With pilot pressure loading of one of the two front sides of the main control spool (2), the spool is moved to the switching position. In the valve, the required ports are connected in this way.

The spring on the opposite side returns the spool to the zero or initial position at pressure relief of the pressurized control spool area.

**For pilot oil supply, see page 13 and 14.**

**Function, section: Type WEH...H****4/3 directional valve with pressure centering of the main control spool, type WEH...H**

The main control spool (2) in the main valve is kept in the zero position by pressurization of the two front faces. One centering bush (12) rests on the housing and fixes the control spool position.

By pressure relief of one front face, the main control spool (2) is moved to the switching position.

The unloaded control spool face displaces the returning pilot oil into channel Y (external) via the pilot control valve.

**👉 Notices:**

The springs (3.1) and (3.2) do not have a return function in this version. They hold the main control spool (2) in central position in the depressurized condition and with horizontal installation.

**Pilot oil supply** (schematic illustration)

**Further explanations on page 14.**

## Pilot oil supply

### Type WH...

The pilot oil supply and return is implemented **externally** via channel X and Y.

### Type WEH...

The pilot oil supply is implemented **externally** - via channel X - from a separate pressure supply.

The pilot oil return is implemented **externally** - via channel Y - into the tank.

### Type WEH...E...

The pilot oil supply is implemented **internally** from channel P of the main valve. (see page 15, footnotes <sup>5)</sup> and <sup>6)</sup>)

The pilot oil return is implemented **externally** - via channel Y - into the tank. In the subplate, port X is closed.

### Type WEH...ET...

The pilot oil supply is implemented **internally** from channel P of the main valve.

The pilot oil return is implemented **internally** - via channel T - into the tank. In the subplate, ports X and Y are closed.

### Type WEH...T...

The pilot oil supply is implemented **externally** - via channel X - from a separate pressure supply.

The pilot oil return is implemented **internally** - via channel T - into the tank. In the subplate, port Y is closed.

### Throttle insert

Use of the throttle insert (5) is necessary if the pilot oil supply in channel P of the pilot control valve is to be limited (see below).

The throttle insert (5) is inserted in channel P of the pilot control valve.

#### Notices:

**The modification of the pilot oil supply may only be performed by authorized specialists or at the factory!**

- ▶ Pilot oil supply X or return Y **external**:
  - The maximum admissible operating parameters of the pilot control valve must be observed (see data sheet 23178)!
  - Maximum pilot pressure: please observe page 16!
- ▶ Pilot oil supply **internal** (version "ET" and "E"):
  - Minimum pilot pressure: please observe page 15!
  - In order to prevent inadmissibly high pressure peaks, a **"B10" throttle insert** has to be provided in port P of the pilot control valve (see above).
  - In connection with version "H", the **pressure reducing valve "D3"** (see page 38) is also required.

- 3 Pilot control valve
- 4 Main valve
- 5 Throttle insert

**Technical data**

(For application outside these values, please consult us!)

## Technical data

(For application outside these values, please consult us!)

Druckflüssigkeit	Klassifizierung	Geeignete Dichtungsmaterialien	Normen	Datenblatt
Mineralöle	HL, HLP, HLPD, HVLP, HVLPD	NBR, FKM	DIN 51524	90220
Biologisch abbaubar	▶ wasserunlöslich	HETG	ISO 15380	90221
		HEES		
	▶ wasserlöslich	HEPG	ISO 15380	
Schwerentflammbar	▶ wasserfrei	HFDU (Glykolbasis)	ISO 12922	90222
		HFDU (Esterbasis)		
		HFDR		
	▶ wasserhaltig	HFC (Fuchs: Hydrotherm 46M, Renosafe 500; Petrofer: Ultra Safe 620; Houghton: Safe 620; Union: Carbide HP5046)	ISO 12922	90223

### Important information on hydraulic fluids:

- ▶ For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ▶ There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ▶ The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ **Bio-degradable and flame-resistant – containing water:** If this hydraulic fluid is used, small amounts of dissolved zinc may get into the hydraulic system.

### ▶ Flame-resistant – containing water:

- Due to increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended - if possible specific to the installation - to back up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.
- Depending on the hydraulic fluid used, the maximum ambient and hydraulic fluid temperature must not exceed 50 °C. To reduce the heat input in the component, a maximum duty cycle of 50% must be set for on/off valves in continuous operation (measuring time 300 s). If this is not possible due to the function, an energy-reducing control of these components is recommended, e.g. via a PWM plug-in amplifier.

- 4) ▶ **Internal pilot oil supply:**
- With a higher pilot pressure, use of a **pressure reducing valve "D3"** is required (if it is not used pilot pressure = operating pressure at the port).
  - In connection with version "H", the **pressure reducing valve "D3"** is also required.
- ▶ **External pilot oil supply:**
- Compliance with the maximum pilot pressure must be ensured by appropriate measures (e. g. protection of the separate pilot oil circuit by means of a pressure relief valve)!
- 5) Symbol S only for NG16
- 6) For symbols C, F, G, H, P, T, V, Z, an internal pilot oil supply is

only possible if the flow from P to T in the central position (for 3-spool position valve) or while crossing the central position (for 2-spool position valve) is so large that the pressure differential of P to T reaches a value of at least 7.5 bar [109 psi] and the pilot oil return Y is implemented externally.

- 7) For symbols C, F, G, J, H, P, T, V, Z, S<sup>5)</sup> – by means of preload valve (not NG10) or correspondingly high flow. (Determination of the required flow, see "Preload valve" characteristic curves on page 39.) For NG10, a check valve with a cracking pressure of 7.5 bar [109 psi] is to be provided in the return line to the tank. The pilot oil return Y must be implemented externally.

## Switching times

Pilot pressure		bar [psi]	70 [1015]	210 [3046]	250 [3626]	Spring
			ON			OFF
NG10	▶ Without throttle insert	ms	40 ... 60	–	40 ... 60	20 ... 30
	▶ With throttle insert	ms	60 ... 90	–	50 ... 70	20 ... 30
NG16	▶ Without throttle insert	ms	50 ... 80	–	40 ... 60	50 ... 80
	▶ With throttle insert	ms	110 ... 130	–	80 ... 100	50 ... 80
NG25 ("4W.H 22")	▶ Without throttle insert	ms	40 ... 70	40 ... 60	–	50 ... 70
	▶ With throttle insert	ms	140 ... 160	80 ... 110	–	50 ... 70
NG25 ("4W.H 25")	▶ Without throttle insert	ms	70 ... 100	–	50 ... 70	100 ... 130
	▶ With throttle insert	ms	200 ... 250	–	120 ... 150	100 ... 130
NG32	▶ Without throttle insert	ms	80 ... 130	–	70 ... 100	140 ... 160
	▶ With throttle insert	ms	420 ... 560	–	230 ... 350	140 ... 160

### Notices:

- ▶ Switching times = Contacting at the pilot control valve until start of opening of the control edge in the main valve and change in the control spool stroke by 95%)
- ▶ The switching times are measured according to ISO 6403 with HLP46,  $\vartheta_{oil} = 40 \text{ °C} \pm 5 \text{ °C} [104 \text{ °F} \pm 9 \text{ °F}]$ .  
With different oil temperatures, variations are possible!
- ▶ The switching times were determined using DC solenoids. They decrease by approx. 20 ms if AC solenoids are used.
- ▶ The shut-off of the solenoids creates voltage peaks, which can be reduced by the use of suitable diodes.
- ▶ The switching times increase by approx. 30 ms if the pressure reducing valve "D3" is used.
- ▶ The switching times have been determined under ideal conditions and may differ in the system, depending on the application conditions.

**Characteristic curves: NG10**

 (measured with HLP46,  $\vartheta_{oil} = 40 \pm 5^\circ\text{C}$  [104 ± 9°F])

 **$\Delta p$ - $q_v$  characteristic curves**

Symbol	Spool position				Zero position

 Important notices see page 28.

**Performance limits:** important information **Notice** (applies to all sizes):

The specified switching power limits apply to the use with two directions of flow (e. g. from P to A and simultaneous return flow from B to T at a ratio of 1:1). Due to the flow forces acting within the valves, the admissible switching power limit may be considerably lower with only one direction of flow (e. g. from P to A

while port B is blocked, with flow in the same or in different directions)!

In such cases of application, please consult us!

**The switching power limit was established while the solenoids were at operating temperature, at 10% undervoltage, and without tank preloading.**

<b>NG16</b>	<ul style="list-style-type: none"> <li>▶ With pilot oil supply <b>X internal</b>, a preload valve has to be used for flows &lt; 160 l/min [42 US gpm] due to the negative overlap of the symbols C, Z and HC, HZ.</li> <li>▶ 4/3 directional valves with pressure centering of the control spool in the main valve can be used above the indicated performance limit. ## Dimensions

- 1 Main valve
- 2 Pilot control valve type 4WE 6 ... (data sheet 23178):
- 2.1 ▶ Pilot control valve type 4WE 6 D... (1 solenoid) for main valves with symbols C, D, K, Z
  - ▶ Pilot control valve type 4WE 6 JA... (1 solenoid "a") for main valves with symbols EA, FA, etc., spring return
  - ▶ Pilot control valve type 4WE 6 MA... (1 solenoid "a") for main valves with symbols HEA, HFA, etc., hydraulic spool return
- 2.2 ▶ Pilot control valve type 4WE 6 Y... (1 solenoid) for main valves with symbol Y
  - ▶ Pilot control valve type 4WE 6 JB... (1 solenoid "b") for main valves with symbols EB, FB, etc., spring return
  - ▶ Pilot control valve type 4WE 6 MB... (1 solenoid "b") for main valves with symbols HEB, HFB, etc., hydraulic spool return
- 2.3 ▶ Pilot control valve type 4WE 6 J... (2 solenoids) for main valves with 3 spool positions, spring-centered
  - ▶ Pilot control valve type 4WE 6 M... (2 solenoids) for main valves with 3 spool positions, pressure-centered
- 3.1 Solenoid "a"
- 3.2 Solenoid "b"
- 4 Manual override, "N", optional
  - ▶ Actuation of the manual override is only possible up to a tank pressure of approx. 50 bar. Avoid damage to the bore of the manual override! (Special tool for the operation, separate order, material no. **R900024943**). When the manual override is blocked, the operation of the solenoid must be prevented!
  - ▶ Simultaneous actuation of the solenoids must be prevented.
- 5 Solenoid **without** manual override
- 6 Solenoid **with** manual override
- 7 Height of the diversion plate with hydraulic actuation (type WH...)
- 8 Switching time adjustment (wrench size 6), optional
- 9 Pressure reducing valve, optional
- 10.1 Machined valve contact surface; porting pattern according to ISO 4401-05-05-0-05 and NFPAT3.5.1 R2-D05
- 10.2 Machined valve contact surface; porting pattern according to ISO 4401-07-07-0-05 and NFPAT3.5.1 R2-D07
- 10.3 Machined valve contact surface; porting pattern according to ISO 4401-08-08-0-05 and NFPAT3.5.1 R2-D08
- 10.4 Machined valve contact surface; porting pattern according to ISO 4401-10-09-0-05 and NFPAT3.5.1 R2-D10
- 11 Name plate pilot control valve
- 12 Name plate complete valve
- 13 Seal rings
- 14 Space required for removing the mating connector
- 15 2-spool position valves with spring end position in the main valve (symbols A, C, D, K, Z)
- 16 2-spool position valves with spring end position in the main valve (symbols B, Y)
- 17 3-spool position valves, spring-centered; 2-spool position valves with hydraulic end position in the main valve
- 18 3-spool position valves, pressure-centered
- 19 Locking pin

**Subplates** (separate order) with porting pattern according to ISO 4401 see data sheet 45100.

**Valve mounting screws see page 35.**

**Stroke setting, mounting options**  
(dimensions in mm [inch])

The stroke of the control spool is limited by the stroke setting (1). The control spool stroke is shortened by loosening the lock nut (2) and clockwise rotation of the adjustment spindle (3). The control chamber (4) must be depressurized for this.

NG	L4
10	6.5 [0.26]
16	10 [0.39]
25 ("W.H 22")	9.5 [0.37]
25 ("W.H 25")	12.5 [0.49]
32	15 [0.59]

<sup>2)</sup> Version "W.H 22"

<sup>3)</sup> Version "W.H 25"

#### Notice:

The dimensions are nominal dimensions which are subject to tolerances.

## Switching time adjustment

The switching time of the main valve (1) is influenced by using a twin throttle check valve (2) (type Z2FS 6; data sheet 27506).

### Modification of supply (3) to discharge control (4):

Remove the pilot control valve (5) – The plate (6) to accept the seal rings stays in place – Turn the switching time adjustment (2) around its longitudinal axis and put it back, install the pilot control valve (5).

Type .WEH 10 ..4X/...S  
Type .WEH 10 ..4X/...S2

#### Notice:

The modification may only be performed by authorized specialists or at the factory!

## Pressure reducing valve "D3"

The pressure reducing valve (8) has to be used at a pilot pressure above 250 bar [3626 psi] (with "WEH 22 ...": 210 bar [3046 psi]) and with version "H".

The secondary pressure is kept at a constant level of 45 bar [652 psi].

#### Notice:

- ▶ If a pressure reducing valve "D3" (8) is used, a "B10" throttle insert has to be installed in channel P of the pilot control valve.
- ▶ The modification may only be performed by authorized specialists or at the factory!

Type .WEH 10 ..4X/.../..D3

## Preload valve (not for NG10)

In case of valves with depressurized circulation and internal pilot oil supply, the installation of the preload valve (9) in channel P of the main valve is required in order to build up the minimum pilot pressure.

The pressure differential of the preload valve is to be added to the pressure differential of the main valve (see characteristic curves) to result in one total value. The cracking pressure amounts to approx. 4.5 bar [65 psi].

- 9.1 Preload valve
- 9.2 Preload valve
- 10 Main valve
- 11 Subplate
